WINTER MOTH CONTROL STEPS

Time of Year	Moth Activity	Steps You Can Take
NOVEMBER JANUARY	photo: D. Swanson	 Tape and band trees with sticky substance tape Prevents females from laying eggs on tree
	moths on trees photo of male swarming on tree attracted by female	See reverse for ''sticky'' product information
APRIL		 Spray a dormant oil on trunk and branches before leaves emerge. Kills overwintering eggs
	photo: R. Childs EGGS ON TREES photo of newly hatched eggs on fiber strip	 Encourage birds Keep trees/shrubs moist & top-dress with compost
MAY		• Apply Bacillus thuringiensis var. kurstaki (Btk), to emerging leaves - kills young inchworms feeding on leaves
	photo: MaIne Forest Service INCHWORMS EAT LEAVES	Non-selective – kills many species of butterflies & moths
		Pesticides- spinosad & permethrin are toxic to fish, mollusks & aquatic invertebrates
JUNE - NOVEMBER		• Do not remove landscape material (soil, plants, & weeds) from infested areas
	photo: S. Vachon LEAF DAMAGE ON TREE	• Keep trees & shrubs well watered and top dress with compost
		(Earthen cocoons of winter moth are in the soil and can easily be spread to a new location)
